

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0033] with the following amended paragraph:

[0033] The retarder layer 34 includes a plurality of first polarizing cell areas 34A and a plurality of second polarizing cell areas 34B that have different light polarization. The first and second polarizing cell areas 34A and 34B, respectively, are arranged in alternating lines. Otherwise, the first and second polarizing cell areas 34A and 34B may be arranged in such a manner as to be alternated in all of the vertical and horizontal directions. As illustrated in FIG. 8, the first and second polarizing cell areas 34A and 34B may output linearly polarized lights, which are substantially perpendicular to each other, to separate a left-eye picture from a right-eye picture.
